\_\_\_\_\_\_

- '接口程序文件名: UTC\_Prn.dll
- '修改日期: 2006年7月21日,13:38:38 By Joshua\_Jia
- '以下是需调用的接口函数说明(Delphi 下的声明):

'-----

#### "[打印开始,vcHDC-预览设备句柄,bPreview-是否在一个画布上预览]

function UTC\_Begin(vcHDC: HDC; bPreview: Boolean): Boolean; stdcall; external 'UTC\_Prn.dll';

### [设置打印的文字字体,大小,及格式]

function UTC\_SetFont(FontName: PChar; FontSize: Integer; Bold, Italic, Underline, StrikeOut: Boolean): Boolean; stdcall; external 'UTC\_Prn.dll';

### "[字体设置,在外部设备坐标(X, Y)处打印文本内容 Text, Angle-是文字旋转角度]

function UTC\_Text(X, Y: Real; Text: PChar; Angle: Integer): Boolean; stdcall; external 'UTC\_Prn.dll';

#### '[根据坐标位置打印一个矩形]

function UTC\_Rectangle(X1, Y1, X2, Y2: Real; PenWidth: Integer): Boolean; stdcall; external 'UTC\_Prn.dll';

### '[根据坐标位置打印一条线]

function UTC\_Line(X1, Y1, X2, Y2: Real; PenWidth: Integer): Boolean; stdcall; external 'UTC\_Prn.dll';

### '[在坐标 X, Y 处打印条形码, Barcode Type-条码的码制]

function UTC\_Barcode(X, Y, Width, Height: Real; BarcodeData, BarcodeType: PChar; Angle: Integer; IsReadable: Boolean): Boolean; stdcall; external 'UTC\_Prn.dll';

### '[打印图形,格式为 bmp]

function UTC\_Bmp(X, Y, Width, Height: Real; PicName: PChar): Boolean; stdcall; external 'UTC\_Prn.dll';

## [调整条形码比率]

procedure UTC\_SetBCRatio(iRatio: Integer); stdcall; external 'UTC\_Prn.dll';

### '[打印结束,和 UTC\_Begin 配对使用]

function UTC\_End: Boolean; stdcall; external 'UTC\_Prn.dll';

#### '[打开打印机,判断是否有默认打印可用]

function UTC\_OpenPrinter(): Boolean; stdcall; external 'UTC\_Prn.dll';

## '[打印完后释放打印机资源]

function UTC\_ClosePrinter(): Boolean; stdcall; external 'UTC\_Prn.dll';

# 过程声明举例:(此过程将会打印一个条形码和一个日期文字)

```
procedure PrnSmallBarcode(ix,iy:Real;strBarcode, strDate: string);
var
h: HDC;
begin
UTC_Begin(h, false);
UTC_SetFont('黑体', 6, true, false, false, false);
UTC_SetBCRatio(2); //如果用此函数设定比率,则条码的宽度须设为 0,来自动适应,否则如果要指定宽度,则可不用此函数
UTC_Barcode(ix, iy, 0, 5, PChar(strBarcode), 'CODE128C', 0, true);
UTC_Text(ix, iy+20, PChar(strDate), 0);
UTC_End;
End;
```

# 调用过程:

UTC\_OpenPrinter; PrnSmallBarcode( 5,10, '1234567890', '2006-01-01'); UTC\_ClosePrinter;

# 常用条码码制:

CODE128A CODE128B CODE128C (此码制只能包含数字) CODE128AUTO CODE39
